Letter of Recommendation for Mr. Sylvain Debaudringhien

Sylvain joined the Research Imaging Technology Department at Carl Zeiss, Oberkochen Germany in August 1998. He worked there in the software development group and designed, programmed and tested successfully the following projects: within the CMO Development -a joint project with KLA Tencor- he was responsible for the graphical user interface as well as for the hardwarecontrol-software. This project often brought him to Jena in order to support the integration of his software into the CMO hardware. For the OPTIMA project -acquiring information from opticians' notes and graphics concerning the manufacturing of the individual eye-glass- he made the graphical user interface, including an image editor. In an other project he was responsible for the software control of a firewire camera, using Directshow. In his present project, he is working in a group of 5 software engineers. He is responsible for the overall concept of the control software for polishing robots, on which this group is working. In addition, he is programming essential parts of this control software, using .Net.

Sylvain, due to his remarkable software and computer skills, is self-reliant. He is working in an autonomous, quick and reliable manner. He has developed a sense of perfection and is curious about new experiences. His friendly manners and integrative personality make sure that he will integrate fast into a new professional or private environment and find new colleagues or friends, who will esteem him soon due to his professional skills combined with his personality.

I found Mr Sylvain Debaudringhien a valuable enrichment for my group and am wishing him the very best for his professional and private future.

Oberkochen, december 12, 2002

Dr.-Ing. Michael Claus
Manager
Research Imaging Technology
